

IMSD MEI

The IMSD (In Machine Staining Device) MEI is an Intelligent Banknote Neutralization System with security ink as a neutralization agent. This system offers protection of the funds inside a cash deposit machine equipped with a MEI Cashflow® cassette against ram raids, forcing attacks, etc. while the safe door is closed.

- Designed for retail solutions manufacturers (OEM supply)
- Indelible security ink
- Fast and effective staining
- Modular solution

IMSD MEI

The IMSD MEI cassette upgrade kit enables the MEI Cashflow® cassette to be automatically connected to the ink staining system, located inside the cash deposit machine. The Security Control Module detects attacks at its earliest stage and defines the protection level and attributes of the system.

SPECIFICATIONS

	Dimensions	Weight
IMSD MEI cassette upgrade kit	218 mm	163 g

FEATURES

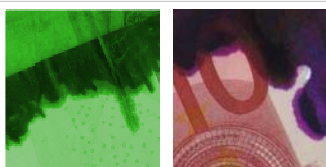

- Fast and effective staining
- Automatic connection between the cassette and the ink spraying system
- No explosives used
- Easy to use
